DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Funahashi (US Patent No. 3,812,782).

Regarding claim 1, Funahashi discloses a roller having a roller body (6), an elastic member (5) which is fitted to the outer circumference of the roller body (6), and the roller body having a fitted part for the elastic member. Figures 7 through 10 show embodiments with fitted parts used in conjunction with the elastic member. (Col. 3, lines 56-68; Col. 4, lines 1-15.)

Regarding claim 2, Funahashi discloses the elastic member being a doughnut shape. (See Figures 8 and 10.) The fitting part in Funahashi also has stepped portions as shown in Figure 9.

Regarding the limitation that the adherend has a doughnut shape, "[e]xpressions relating the apparatus to contents thereof during an intended operation are of no significance in determining patentability of the apparatus claim." *Ex parte Thibault*, 164 USPQ 666, 667 (Bd. App. 1969). "Inclusion of material or article worked upon by a structure being claimed does not impart patentability to the claims." *In re Young*, 75 F.2d 996, 25 USPQ 69 (CCPA 1935) (as restated in *In re Otto*, 312 F.2d 937, 136 USPQ 458, 459 (CCPA 1963)). (See MPEP §2115.) Therefore, the shape of the adherend was not

considered in determining the patentability of the claims. The roller disclosed in Funahashi is capable of being used with a doughnut shaped adherend, thus it meets the claim limitations.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Weihrauch (US Patent No. 5,779,610).

Regarding claim 1, Weihrauch discloses a roller having a roller body (11) and an elastic member (12) which is fitted to the outer circumference of the roller body (11) by means of a fitted part (20) for the elastic member. (See Figures 1 and 2; Col. 3, lines 39-67; Col. 4, lines 1-4.)
